

NorthPointe Capital, LLC
Large Cap Value
3rd Quarter 2013

During the third quarter, broad market indices advanced higher, with the exception of a mid-summer pause, despite geopolitical concerns and uncertainty in the domestic monetary policy (among other issues). Small capitalization stocks outperformed large caps during the third quarter as the Russell 2000[®] Index returned 10.21% as compared to the 6.02% return of the large company Russell 1000[®] Index. Growth stocks outperformed value stocks during the most recent quarter with the 8.11% gain in the Russell 1000[®] Growth Index exceeding the 3.94% gain in the Russell 1000[®] Value Index. The better results for the growth index were primarily due to much lower exposure to the underperforming Telecommunication Services and Utilities sectors as well as greater exposure to the outperforming Information Technology and Health Care sectors.

The narrative below appeared in last quarter's letter to you, but it bears repeating as the situation remains the same.

“Investors appear to spend a great deal of time debating the activities of the Federal Reserve, whether the U.S. economy is growing and at what pace, and how economic policies of foreign nations will impact the overall stock market. While these might be useful conversations to some, we prefer not to spend too much our time (if any time at all) focusing on such issues. Rather, we find that time spent tracking new product launches, gauging the success of a new sales strategy or discussing the impact of a new management team to be much more relevant in identifying attractive investment opportunities. We focus on fundamentals - the fundamentals of a particular company and industry - rather than on global macro forces whose direction and impact are best left to others.”

For the period your portfolio returned 4.68%, which compares to the 3.94%% return of the Russell 1000[®] Value Index. Please find further detail below on the performance of your portfolio during quarter.

During the 3rd quarter, your holdings were most impacted positively by stock selection within the Industrials, Health Care, and Information Technology Sectors. Stock selection was weakest within the Telecommunication and Energy Sectors. The portfolio contained three securities that returned over 35% for the period. They were Facebook, Gulfport Energy, and Ocwen Financial. Facebook, the gigantic social networking company, drove revenue and earnings higher on the strength of advertising. A plethora of sell-side upgrades and increased price targets continue to move shares higher. Gulfport Energy, a company involved in the exploration and production of oil and natural gas, delivered impressive production results in their Utica shale acreage. Ocwen Financial, a

servicer and originator of mortgage loans, witnessed their shares being propelled higher on continued underlying business momentum and a seemingly ever increasing pipeline.

The portfolio is positioned to perform in a stock market that rewards investing in undervalued companies—those that are experiencing improving fundamentals. Strategies that focused on high growth rates, high beta, and positive price momentum were among the most successful this past quarter, while metrics based on high dividend yields and high returns on equity, deep value tended to be the underperformers.

We remain focused on finding unique large cap companies that can grow their business, that sell at attractive valuation levels and that are not well understood. These types of investments should perform irrespective of the market environment. We believe that your portfolio contains precisely these types of securities. Our stock selection has been and will continue to be our instrument for delivering value. We truly appreciate and value your business. If you should desire any further information or clarity, please do not hesitate to contact us. We have always taken great pride in being available for our clients.

Sincerely,

Peter Cahill, CFA
CIO, Portfolio Manager
